How we source & approve, *end to end*, in three modules.

Every item we buy overseas runs the same five-stage path — from spec, through competing quotes leveled on true landed cost, through a Florida fit-check, to a recommendation Rob approves. Here is the whole machine on one page.

01 The three modules

One **item** collects many **quotes**; each quote names one **vendor**.

Read it left to right: the **Procurement Item** is the thing you're buying and the center of gravity. The competing offers attach to it as **Vendor Quotes**. Each quote points to a supplier in the **Vendors** directory. The winner gets stamped back onto the item.

CUSTOM MODULE • THE RECORD

Procurement Items

One record per thing being sourced

Name e.g. QueenMattress

Stage 10-step pipeline

Property_Scope • Category

Target_Qty • Est. Spend

Florida_Validation • HTS

Awarded_Vendor → winning quote

PO_Number • Decision_Notes

Center of gravity. Decisions live here — never in email.

↓ has many
(1 : N)

CUSTOM MODULE · THE COMPARE

Vendor Quotes

One record per vendor's offer

Vendor_Vetted ✓

Existing_Supplier ✓

Default_Payment_Terms

Vendor_Type · Notes

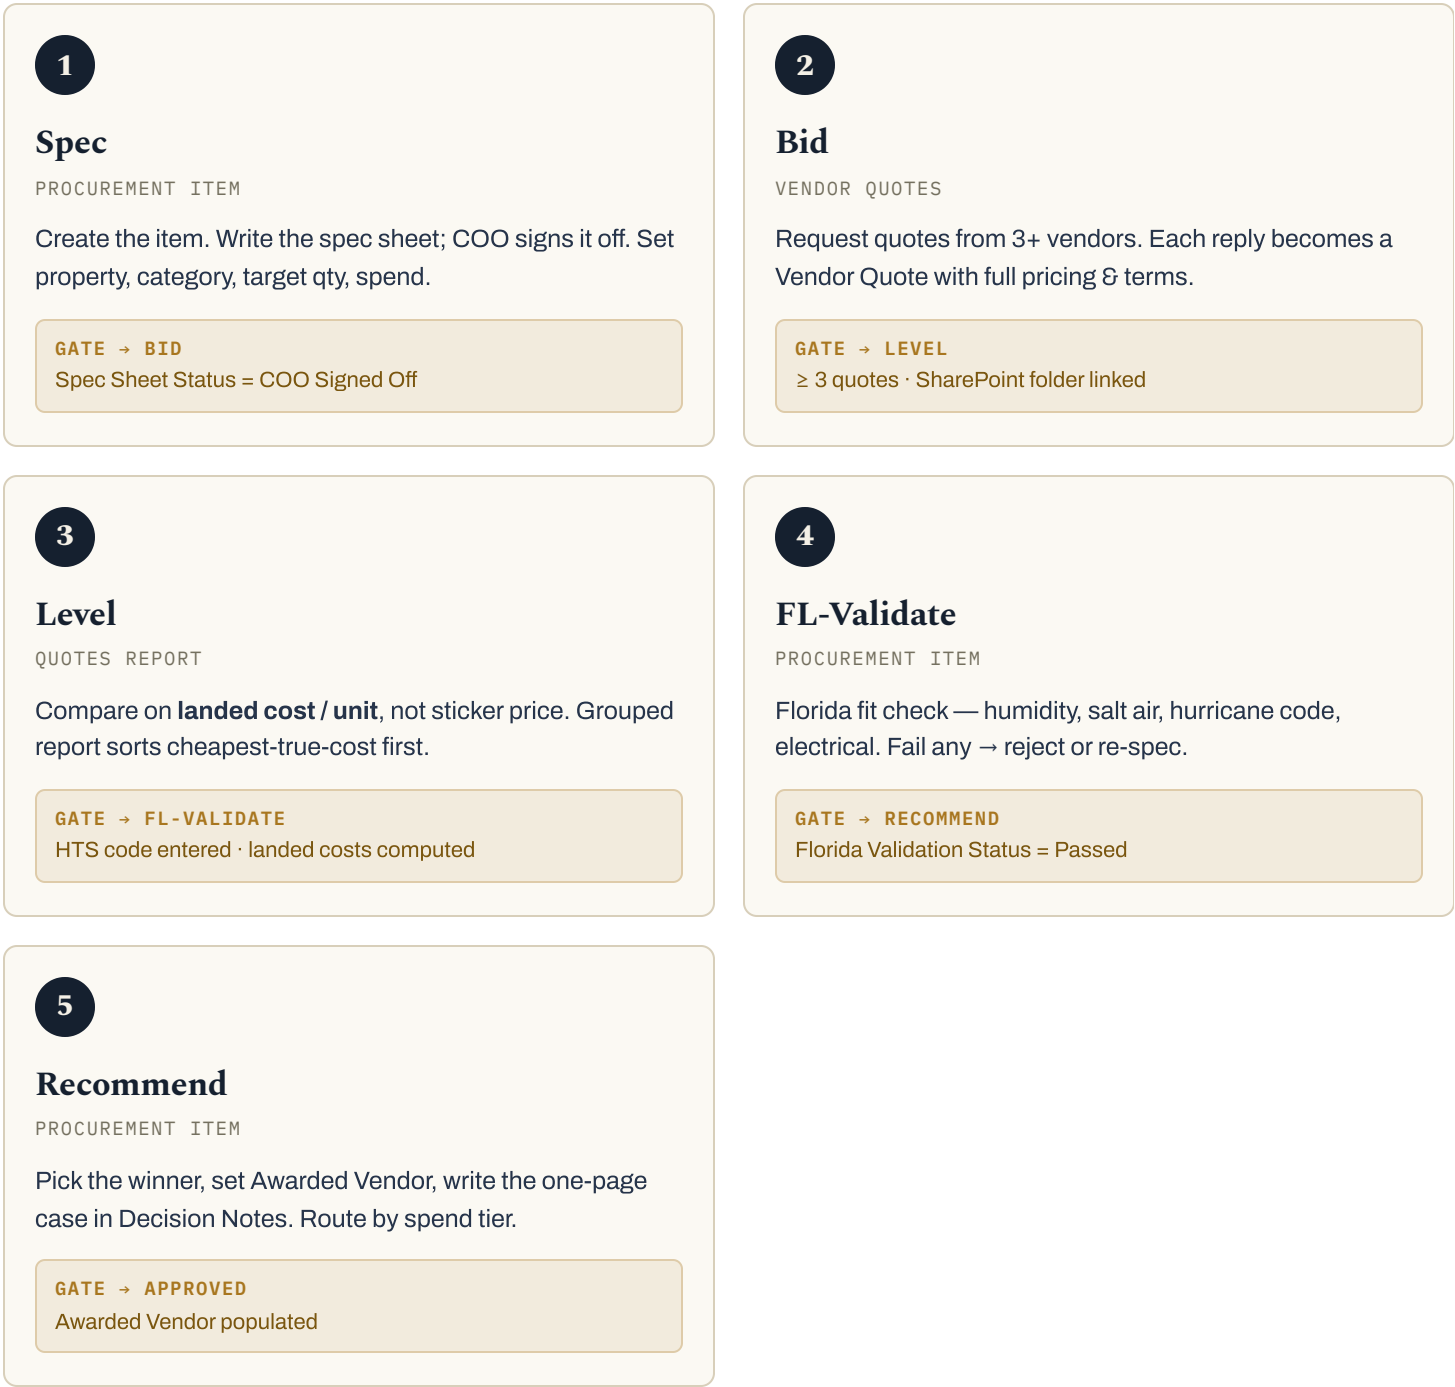

21 held vendors + 20 contacts migrate in.

Picking a winner sets the quote's **Quote_Status → Awarded**, which a workflow stamps onto the item's **Awarded_Vendor** lookup. **One award = one quote record**, structurally — no ambiguity about who won or on what terms.

02 The five-stage path

The item's **Stage** field. Gates block the jump until the prior step is satisfied.

Florida validation

Stage 4 — every item must survive the Florida operating environment.

Humidity & mold

finishes, adhesives, substrates

Salt-air corrosion

coastal property hardware

Hurricane / impact code

exterior & structural items

120V · UL / ETL

no overseas-only electrical

Fail any criterion → the item is rejected or sent back to re-spec. It cannot advance to Recommend.

Landed cost is the spine

Stage 3 — sorting on unit price is misleading for overseas buys.

```
Landed Cost / Unit =  
(Unit×Qty + Freight + Duty/Tariff + Inspection)  
÷ Order Quantity
```

A cheaper unit with worse Incoterms, a longer lead time, or unvetted specs can **land higher and riskier**. The formula field forces apples-to-apples — that's the whole point of the comparison view. Quotes standardized to **USD**.

UNDER \$25K

COO

COO approves.

\$25K – \$100K

CEO + sample

CEO approves; physical sample required.

OVER \$100K

CEO + IC

CEO + investment committee, sample, pre-production inspection.

Purchase orders

PO numbers are tracked on the item in `PO_Number` + `PO_Status` across every channel (Alibaba confirmation, Amazon / Home Depot numbers). For office-supplies & linen, Jefferson generates the PO from his template and **attaches the PDF**. No native PO / Quotes / Products modules — that suite is the sprawl that killed v1.

Where the decision lives

The recommendation and the final ruling are written in `Decision_Notes` on the item — **never in email**. Spec sheets, leveled cost models, FL checklists and signed POs attach to the record (or per-quote spec sheets to the quote). One item, one timeline, one source of truth.

BUILDS

Kyle Estocapio

Stands up the modules, fields & workflows. Super-admin.

OPERATES

Jefferson Gomez

Sources, logs items & quotes daily, recommends vendors.

APPROVES

Rob Beyer · CEO

Owens the process; signs every procurement decision.

Architecture of record: Zoho_Architecture.md · ZohoModuleSpec_Quotes_060226.md. Approved v2 — 06/02/26.

Internal orientation artifact · noindex · not a Vercel deploy file.
